

Patents

Our global team of attorneys, scientists, and patent agents plan, develop and manage IP and patent portfolios of start up enterprises and expanding corporations.

Clients benefit from our expertise in sophisticated technical areas, including pharmaceutical, biotechnology, medical devices, polymers, batteries, software, optics and instrumentation.

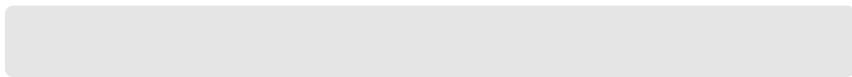

We see growth in these important market segments:

- Alternative Energy
- Medical Devices
- Aerospace
- Automotive
- Ag Vet
- Ag Seeds
- Electronics
- Consumer Products

Our patent attorneys bring valuable and substantial field experience as engineers, scientists and in-house patent counsel. Members of our IP litigation team are skilled in all facets of a comprehensive intellectual property trial practice including patent infringement actions. We have decades of experience defending clients in many industries including: agronomic seeds, analgesics, antibiotics, anticoagulants, anxiolytics, biologics, chemotherapeutics, corticosteroids, cough/cold remedies, synthetic estrogen, erectile dysfunction medication, hormone replacements, hypnotics, medical devices, monoclonal antibodies, synthetic progesterone and veterinary products. We have also been responsible for the defense of purported class actions, as well as shareholder and derivative litigation.

REPRESENTATIVE MATTERS

- Medical Device Company Licensing Patents and Transferring Technology
Represented medical device company in licensing patents and transferring technology from doctors and universities related to surgical implants.
- National Cookware Manufacturer Design Patent Litigation

Successfully defended a nationally known cookware manufacturer in a case involving alleged design patent infringement. The plaintiff, another well-known maker of cookware, attempted to obtain a permanent injunction against our client to prevent it from selling competing cookware--in addition to seeking millions in damages. The jury found for our client across the board.
