Harvey J. Messing has over 30 years of experience in energy, telecommunications and public utility law; business and corporate law; administrative law and condemnation law.

Most of his legal work focuses on representing gas, electric, telephone, water, gas pipeline, and oil pipeline companies in administrative proceedings and in the courts. Typically, this work involves complex ratemaking issues and large sums of money. Due to the significant issues involved, agency decisions are often the subject of judicial review. Consequently, Harvey has served as legal counsel in many important Reported Decisions.

"I am equally pleased to work closely with the general counsels of the largest publicly traded utilities or the general manager of a tiny rural telephone company. The regulatory issues are often the same, even if the dollar amounts are not. All are entitled to the best legal representation I can offer."

Harvey J. Messing

From major companies to the smallest enterprise, Harvey approaches all requests for legal advice and representation from the perspective of the client. Over his long and distinguished legal career, he has proven that good strategies get good results.

"The client has chosen me for legal counsel, and I have an obligation to do everything I ethically can to deliver the best possible result. This generally involves an early determination of a desired result, taking into account the facts and the law, and then developing a settlement or litigation strategy that maximizes the likelihood of attaining the desired result."
